

T.I. no.: 2018 - 13 Updated: -	Topic: SCClub Software 1.5.4
--	-------------------------------------

Date: 02.07.2018	Priority	Need for action
Affected machines: SC Club	High	As soon as possible
From serial number: -	Medium	On next visit to the machine
As of date: -	X Low	X FYI only

IMPROVEMENTS

The following is an overview of the improvements:

Improvements:

- Activation – Bluetooth / MyCoffee App
- Machine cleaning – PIN entry
- Save recipes as PDF – PDF display improved
- Setting for "hot foam proportion" – only in expert mode
- "Grounds through counter" function can be reactivated
- Optimisations – S-M-L / PostSelection

Activation – Bluetooth / MyCoffee App

With the new software, the activation/deactivation of the Bluetooth stick can be carried out by the customer himself. The Bluetooth entry has been created in the "System" menu for this purpose. If the customer has inserted a Bluetooth stick in the machine, he is thus given the option of configuring the machine independently for operation via the "MyCoffee app"; it is no longer necessary to deploy a technician as before. If "Bluetooth" has been activated, this change must be completed by restarting the machine, the customer is notified by a display message, the change is only effective after this.

System > Bluetooth

Previously, the "Bluetooth" function could ONLY be activated/deactivated by entering the service PIN via a checkbox in the machine data; this option is still available.

Machine cleaning with PIN entry

From the field it has been reported that although a PIN for the cleaning menu was programmed on a machine, the Click & Clean milk system cleaning can still be carried when requested without prior input of the cleaning PIN.

With new software, if a cleaning PIN has been programmed, this must also be entered for a pending Click & Clean milk system cleaning.

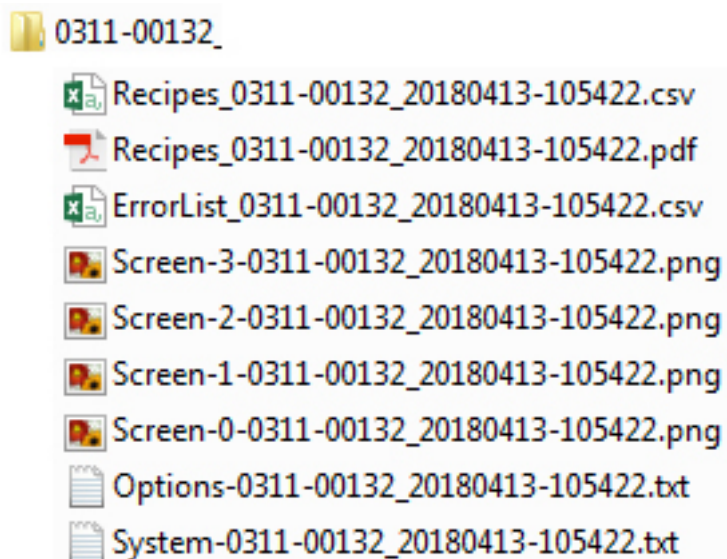

Save recipes as PDF – PDF display improved

If the "Save recipes as PDF" menu item is run (previous service PIN input required), the recipes and display templates are saved as PDF files on a previously inserted USB stick.

Previously, the screens for the display templates were saved in landscape format. Because the SC Club arranged the display in portrait format, the lower part of the saved display template was cut off.

With the new software, the saved screens of the display templates are now displayed correctly in portrait format.

If the "Save recipes as PDF" function is run, a folder with machine and serial number is automatically created on the USB stick and the files are stored in it.

Setting for – hot foam proportion – only in expert mode

The setting dial – hot foam proportion – used to be freely accessible in the beverage recipe for the customer. With this setting, the local hot foam content of a beverage can be changed. At the SC Club, the air pump is already operating in the lowest limit of its range, changing the hot foam proportion setting only has a slight effect on the foam result.

Since, in the SC Club, the settings relating to the milk system should be kept as simple as possible for the customer, this setting dial has been moved to expert mode and is therefore only accessible to service technicians via the service PIN.

Beverages > Change Recipes > Add Milk Foam > Expert Mode

Optimisations with S-M-L / PostSelection

After the release of the software 1.4.2, it was reported that the individual adaptation of the beverage symbols and texts in S-M-L was not correctly implemented in all languages and display errors occurred. Equally, it was also possible that the S-M-L / PostSelection setting was not accepted correctly when "Loading data" via USB stick.

This error been corrected in the new software.
